GitHub: gh • LinkedIn: li • Website: Website

---

Rising Software developer offering critical thinking skills and a desire to take on any challenge. Delivers a great work ethic, energetic approach, efficient multitasking, an ability to work in a fast-paced work environment, and the ability to learn quickly and adapt to new environment changes.

### Work Experience

---

Full Stack Developer • Some Company • New York City, New York

January 2022 - June 2022

- Using the Agile framework, web application backend components were developed while communicating with team members to identify their needs and goals to boost team productivity.
- Used Python libraries such as Pandas and NumPy to analyze large quantities of company data from the WooCommerce REST API.
- Created an Inventory Audit Tool that compared stock quantities from their E-Commerce software and their Fulfilment software freeing up time for bike techs to build more bikes.
- Developed a tool that pulled orders and their order stages and placed them in a Google sheet for later use of third-party software that mapped out orders to allow the team to build/deliver bikes in the most efficient way possible.
- Configured webhooks to be sent to a Flask Server endpoint every time a call was made to a COMPANY Store. The hook data was refined and then later sent to a MySQL database for later use. This tool helped identify returning customers and their bikes as well as new potential customers who have not purchased anything yet.
- Designed and built a web application that pulled recent calls from customers by name. This application featured a backend built with Python 3 and the Flask framework which communicated to a MySQL Database and featured REST API endpoints. The front end of the application was built using the Flutter SDK and was hosted on Google Cloud Console.

Independent Contractor

August 2019 - Present

- Planned, Developed, Tested, and Deployed Mobile Applications, Websites, Plugins, and Tools for various individuals and companies across the country.
- Marketed my services to individuals on freelancing platforms such as Upwork.
- Stepped out of my comfort zone taking on new projects and technologies.
- Communicated with clients to understand the requirements for the product.
- Link to my projects page: [link](#)

### Skills

---

Languages	Python 3, HTML, CSS, JavaScript, PHP, Java, Dart
Frameworks	Flask, Flutter SDK, Spring
Platforms	Android, iOS, Web, WordPress, Google Cloud Services, Linux
Databases	MySQL, MongoDB

### Education

---

University, town, state  
BS Computer Science  
Sept 2015 - May 2019

### Independent Projects

---

River Conditions Application

- Created a backend application using Python 3 and the Flask Framework.
- The application features two API endpoints; Get all Rivers in the selected State and get current river conditions from river ID.
- Hosted on Python Anywhere as a serverless solution
- Connected to front-end Application built using the Flutter SDK
